

ZERO CARBON SOCIETY NEWSLETTER

<http://zcarb.net>

Who Are We?

Zero Carbon is a network of people concerned about climate change. We are a think tank and society based in and around Cambridge University.

Our Position

Reduce greenhouse pollution by 90% by 2030
 Eliminate taxes and have a Carbon Tax instead
 We need all forms of non-fossil fuel energy, including nuclear, carbon capture and intl. solar

How are we different?

Scientific and moderate approach.
 Include all sections of society.
 The numbers of climate change

What do We Do

90% by 2030 campaign
 Speaker Events
 Writing & Publishing Information
 Education (schools) programme

UK Targets "Not Enough To Prevent World Extinction"

- Even if we hit the government's target of reducing Carbon Dioxide pollution, and other countries adopt a similar approach - the world could be committed to up to six degrees of climate change.
- The Amazon rainforest and most of the world's fertile farmland would turn to desert. - Rising seas would flood major cities such as London.
- To prevent a world extinction we need a **90% reduction in greenhouse gases by 2030.**

Talk by Stephen Stretton

Zero Carbon Society in association with CaCC

Wednesday 29th August 6:30pm

One World Cafe

ONE WORLD

New Climate Change Centre Opened by Colin Challen MP

On Wednesday 11th July 2007 a group of climate conscious people led by Colin Challen MP opened 'One World' at 18, Leigh Street, WC1H 9EW. One World is a cafe and a centre for climate change and spiritual development.

Address

18 Leigh Street, Bloombury
 London, WC1H 9PW

Open

12noon - 9pm Monday-Friday
 (also Weekends)

Events

Meditation: 6:30pm-8pm every Thursday
 Fundraising Dinner: Tuesday 21st August
 Next Talk: Wednesday 29th August 6:30pm

"Saving the Planet Need not Cost the Earth"

The Zero Carbon Society recently published it's response to the Centre for Alternative Technology report "Zero Carbon Britain" <http://zerocarbonbritain.com>

We welcome the report and its positive and practical focus of cutting emissions to zero by 2027.

However, we are concerned that the policy suggestions are not fully thought through and may prove to have a high cost.

The Zero Carbon Society proposes to eliminate most conventional forms of taxation and replace with a carbon tax. In parallel we suggest efficient measures to encourage investment in all forms energy supply that don't produce carbon dioxide.

If we eliminate pollution with a smile on our face, other countries may do the same!
